

COMPREHENSIVE CASH MANAGEMENT SOLUTIONS

OSS understands that cash-intensive industries have a significantly higher risk profile compared to other industries. The large volume of cash transactions create an environment naturally attractive to criminal elements. OSS can help minimize risk, including:

Discreet Cash-In-Transit (CIT) & Federal Reserve Bank Deposits

Currency Order Requests

Secure Short-term Vaulting

Smart Safe Programs

OSS personnel leverage an extensive background in critical facility protection that includes the U.S. Department of Energy, Department of Defense and Department of Homeland Security along with numerous Federal, State and Local Correctional/Detention facilities. OSS ensures that our client's assets are secure with the highest level of professionalism, transparency, discretion and safety.

DISCREET CASH-IN-TRANSIT (CIT) & FEDERAL RESERVE BANK DEPOSITS

OSS customizes our secure CIT procedures and protocols for each individual client to maintain continuity of operations, end-to-end secure delivery of our clients' assets and a reduction of potential threats. We do this by,

- Providing secure, discreet asset transportation with 24/7 GPS tracking, transparent accountability and convenient access.
- Enabling "push button simplicity" in scheduling critical asset transportation while never losing sight of the actual physical state of the asset at any point during the transportation process.
- Offering transparency and insight that foster confidence in knowing that critical assets are safely and securely handled with visual verification at will.
- As a part of our CIT services, OSS can handle end-to-end delivery, including cash pickup, validation, and transport to the Federal Reserve Bank or other location specified by the financial institution.

CURRENCY ORDER REQUESTS

OSS has the ability to fulfill currency order requests for cannabis businesses who do not have access to typical commercial banking services. OSS works with its financial institution partners to provide change (currency notes and coin) as an add on to CIT services.

SECURE SHORT-TERM VAULTING

OSS maintains and operates highly secured facilities, with 24/7 armed guard presence, to store cannabis business assets. For security and confidentiality reasons, the locations of the facilities are not released. Each facility exceeds State and Federal standards and is fully licensed and insured. OSS also maintains a close working relationship with the law enforcement entities that are responsible for the geographic locations of our facilities, ensuring the quickest response time in the event of a threat.

OSS clients who utilize our secure storage capability are provided methods of remote monitoring to provide absolute comfort that their assets are stored, secured, and guarded at the highest level.

SMART SAFE PROGRAMS

OSS has partnered with Smart Safe companies to provide its clients with onsite solutions for secure cash handling. These safes are the toughest in the industry and make cash processing faster, safer and more accurate. By automating tedious manual processes that are prone to human error and theft, the smart safe can be used in conjunction with our discreet courier service as a secure control point for operations.

Cash transactions are also given full transparency when viewed in the cloud, including every action from deposits, to change orders, to end-of-day balancing, down to the individual user login info being available to view 24 hours a day, 7 days a week securely from anywhere in the world.
